

Jarvis

Yard staff manual

This is the guide to the four screens you use every day: recording a load, checking what is on hand, the cash box, and what the yard owes its hauliers. It is written for the people doing the work, not for the office.

Everything in here you can do yourself. Anything not in here is either not yours to change or does not exist — and there is a short list at the back of what to do when the screen tells you something is wrong.

1. Signing in, and what you will see

Jarvis runs in a web browser. Open **jarvis.edgemetals.com** and sign in with the password you were given. If the page asks again after you have typed it, the password is wrong — it does not lock you out, so try again.

Your sign-in is a **staff** login. That matters: it decides which screens you can open, and it is deliberate rather than a lack of trust. The yard runs on what you record; the pricing, margins and customer invoices are a separate job with separate consequences.

The menu

Tap the three-line button at the top left to open the menu, and tap it again to close it. The menu slides over the page rather than pushing it aside, so nothing moves under your finger while you are reading.

Figure 1 — the menu. Your four screens are the top of the EDGE YARD group: Loads, Inventory, Petty Cash, Trucker Bills.

The four screens that are yours

Loads, Inventory, Petty Cash and Trucker Bills. Other names may appear in your menu — Board, Bookings, Bills, Invoice, Documents, Truckers, Suppliers, Bot, Tasks. Those belong to the office side of the business and will refuse to open for a staff login, with a message saying access is limited to Loads. That is not a fault, and nothing you did caused it. Ignore them.

2. Loads — the main job

A **load** is one delivery: someone brings metal in, it is weighed, and they are paid. Everything else in the yard is counted from these records, so a load entered properly is the whole job done.

Loads
Camera or upload gross/tare weight, computed net, generated PDF ticket.

THURSDAY, 17 SEPTEMBER 2026 1 load

TURN ON VOICE Click to start listening JARVIS · METALS

Figure 2 — the Loads screen. The four figures at the top are today's running totals; below them the loads are grouped by day, newest first.

Reading the top of the screen

- **loads** — how many are recorded in total.
- **net weight** — the metal, after the truck and any containers are taken off.
- **bought** — money paid out to sellers.
- **sold** — money taken in from buyers.

ALL / PURCHASES / SALES under those figures filters the list. Most of what you enter is a purchase — metal coming in. A sale is metal going back out to a buyer.

Recording a load

Use **+ CREATE INVOICE** for metal coming *in*, and **+ SALE** for metal going *out*. The two forms look the same; only the direction of the money differs, so check the heading at the top of the form before you start typing.

The weights

Each item needs three numbers, and Jarvis works out the third for you:

- **Gross** — everything on the scale: the metal, the truck, the bins.
- **Tare** — the empty weight, taken off the gross.
- **Net** — what you are actually paying for. **Filled in for you.**

You cannot type into Net, and that is on purpose: the amount is worked out from it, and a net weight typed by hand is the one number nobody can check later.

Price and amount

Type the price per pound and the **Amount** fills itself in. If you already know the agreed total, type it into Amount instead and leave the price blank — either way round works.

+ ADD ITEM adds another line when one truck brings two different grades. Each line gets its own weights and its own price, and the TOTAL row adds them up.

It saves as you type

The form says *"Autosaves as soon as you enter an item"* and it means it. If the phone dies or the page closes halfway through, what you had entered is already recorded — reopen it and carry on. You do not need to start again, and you should not re-enter a load because you are unsure, because that creates a second one.

After the load is recorded

Each load appears as a card with the seller's name, the date, its reference (EDGE_77 and so on), the weights, and what was paid. The green **PAID** mark shows the money went out and when.

The buttons on a card

- **View PDF** — the ticket for that load, as the seller sees it.
- **Print (POS receipt)** — the small till-roll receipt for the yard printer.
- **Regenerate PDF** — rebuild the ticket after an edit. Use it if you corrected a weight and the PDF still shows the old one.
- **Send to seller (WhatsApp)** — sends them their ticket.
- **Edit** — reopen the load and correct it.

PDF READY in the corner means the ticket has been made. If it is missing after you finish a load, press Regenerate PDF.

Correct it, do not re-enter it

If a weight or a price is wrong, press **Edit** on that load and fix the number. Entering the load a second time does not replace the first — it adds a second one, and the yard then shows metal it does not have and money it did not pay. If you cannot see how to correct something, leave it and tell the office.

3. Inventory — what is on hand

Inventory is not something you fill in. It is counted, live, from every load on record: what came in, minus what has gone out. Delete a load and its metal leaves the inventory with it.

Figure 3 — Inventory, grouped by item type. The tabs above the table switch between BY ITEM TYPE, PER DAY and PER SELLER.

Reading it

- **Items** — how many separate loads included that grade.
- **Gross / Tare / Net in** — the weights, added up across those loads.
- **Shipped** — how much has gone back out.
- **On hand** — what should be sitting in the yard right now.
- **Amount** — what that metal cost.

FROM and **TO** at the top limit it to a date range. Leave them empty for everything.

A red on-hand figure with a warning triangle

It means Jarvis has been told more metal went out than ever came in — so either a load was never recorded, or one was recorded under the wrong grade. It is not a rounding error and it will not correct itself. Tell the office the item type and the figure; do not try to balance it by adding a load.

4. Petty Cash — the cash box

This is the physical cash in the yard. The figure at the top is what should be in the box right now, and it is the number to check against when you count it.

The screenshot shows the 'Petty cash' app interface. At the top, it says 'Petty cash' and 'Cash paid against a load comes out of this balance.' Below this, the current balance is '\$22,641.03 in the box'. A green button labeled '+ ADD CASH' is in the top right. A table lists transactions with columns for DATE, WHAT, and AMOUNT. Transactions are color-coded: green for positive (cash added) and red for negative (cash paid out). Some rows have a 'DELETE' button. At the bottom right, there is a 'TURN ON VOICE' button and a status bar showing 'JARVIS · METALS'.

DATE	WHAT	AMOUNT	
09/19/2026	Paid — EDGE_76	-\$6,790.10	
09/19/2026	Paid — EDGE_77	-\$2,259.10	
09/19/2026	Cash added	+\$10,000.00	DELETE
09/17/2026	Reversed — expense edited	+\$200.00	
09/17/2026	Paid	-\$300.00	
09/17/2026	Paid — EDGE_75	-\$4,666.47	
09/17/2026	Cash added	+\$2,045.73	DELETE
09/17/2026	Cash added	+\$6,000.00	DELETE
09/17/2026	Cash added	+\$1,706.00	DELETE
09/16/2026	Paid	-\$50.00	
09/16/2026	Paid — EDGE_73	-\$14,200.00	
09/16/2026	Cash added	+\$30,000.00	DELETE
09/16/2026	Paid — EDGE_72	-\$4,279.92	

Figure 4 — Petty Cash. Money in is green and positive; money out is red and negative.

The two kinds of line

- **Cash added** — money put into the box. Recorded with **+ ADD CASH**.
- **Paid — EDGE_76** — money that left the box to pay a load. These appear on their own when you pay a seller in cash; you do not enter them here.

DELETE appears only beside cash you added, and only to undo a mistake made entering it. A payment against a load cannot be deleted here — that is corrected on the load itself.

Count the box against this figure, not against memory

If the box and the screen disagree, say so the same day and say by how much. A difference found on the day is a mistake somebody can still remember; the same difference found next month is an argument.

5. Trucker Bills — what the yard owes hauliers

When a haulier invoices the yard for moving a load, it is recorded here, and what has been paid against it is tracked alongside.

Figure 5 — Trucker Bills with nothing recorded yet. The three figures stay at zero until the first bill is added.

Adding a bill

+ **ADD BILL** takes the haulage company, the date, their ticket or invoice number, and the amount. The three figures at the top then show **billed**, **paid** and **outstanding**.

Outstanding is the one that matters: it is what the yard still owes. If a driver says he has not been paid, this screen is the answer — and if it shows paid and he disagrees, that is for the office, not an argument at the gate.

6. When something looks wrong

Most of what follows is not a fault. Knowing which is which saves a phone call.

"Staff access is limited to Loads"

You opened one of the office screens. Nothing is broken and you have done nothing wrong. Go back to the menu and pick one of your four.

The page is slow to open

The bigger screens fetch everything at once. Give it a few seconds before pressing again — pressing twice does not make it faster, and on a form it can record the same thing twice.

A load will not save

Check you have a seller name and at least one item with a weight. If it still refuses, write down what you entered before you close the page, so it can be entered once and correctly.

The PDF shows old numbers

Press **Regenerate PDF** on that load. The ticket is made once and kept; editing the load does not rebuild it automatically.

Something is wrong and none of the above fits

Say what screen you were on, what you pressed, and what it said — word for word if there was a message. "It is not working" cannot be acted on; "Loads, pressed Regenerate PDF, said file not found" can be fixed in minutes.

What you cannot do, and why

A staff login cannot open supplier pricing, customer invoices, margins or the document generator. This is not about trust. Those screens decide what a customer is charged and what a supplier is owed, and a mistaken keystroke there leaves the yard rather than staying in it. Your four screens are where the yard's real record lives — if they are right, everything downstream is right.
